DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Voorhees (US 3,774,695).

Regarding claim 1, Voorhees discloses an implement comprising a soil working part, seen generally as (28), a hitch part pivotally connected to the soil working part, seen by arms (36, 38) in Fig. 8, which include a hitch (12), and extensible linkage connected to the soil working part, seen as bracket (32) with turnbuckle (34), the extensible linkage having an extended position and a retracted position, the soil working part pivotally shiftable about the hitch part in response to the shifting of the linkage between its extended and retracted positions, as Voorhees describes in column 3, lines 45-52.

Regarding claim 2, Voorhees discloses a transverse frame member, seen as frame means (30), a plurality of transversely spaced downwardly projecting scarifying teeth, seen as teeth (50), a plurality of transversely spaced tines, seen as fingers (56), the hitch including a hitch bar seen as arms (36, 38), and being pivotally connected to the frame means (30) as Fig. 8 illustrates, the teeth (50) located between fingers (56) and hitch (12), the linkage carried between the frame means (30) and arms (46, 48) as

Art Unit: 3671

Fig. 8 shows, the angle of the teeth and tines with the soil being adjustable by shifting the linkage between its extended and retracted positions as Vorhees describes in column 3, lines 45-52.
